

KLABS Alcohol Breath Analyzer

Description

The Alcohol Breath Analyzer is a high-precision portable instrument designed for accurate detection of alcohol concentration in breath samples. It is equipped with an advanced fuel cell sensor that ensures high sensitivity, fast response, and long-term stability.

The device features a clear digital display and an efficient data management system, allowing easy operation and storage of test results. With built-in memory and wireless connectivity, it is suitable for continuous field use without the need for external printing devices.

Its compact design and robust construction make it ideal for professional applications in law enforcement, workplace safety, and compliance monitoring.

Features

- Advanced fuel cell sensor for accurate measurement
- Fast response time with reliable results
- Large internal memory for data storage
- Digital display for clear reading
- Wireless connectivity for data transfer
- User-friendly interface for easy operation
- Portable and compact design
- Suitable for continuous field applications

Uses

- Measurement of alcohol concentration in breath
- Roadside alcohol testing
- Workplace alcohol monitoring
- Industrial safety inspections

KBA-1460

Technical Specifications

Parameter	Specification
MODEL	KBA-1460
BRAND	KLABS
Sensor Type	Fuel Cell Sensor
Display	Digital Display
Memory	Up to 50,000 Records
Connectivity	Bluetooth
Measurement Range	As per configuration
Response Time	Fast
Power Supply	Rechargeable Battery
Operation	Portable
Calibration	Periodic
